NO RIGID QUALIFICATION REQUIREMENTS

Programmers require good general intelligence and analytical, orderly minds. You may qualify for training if you are a high school graduate or its equivalent and can achieve a satisfactory grade on the E.C.P.I. aptitude test. Training in mathematics is *not* necessary. A personal interview with an E.C.P.I. counselor will help determine where you fit into the Data Processing industry.

ELECTRONIC COMPUTER PROGRAMMING INSTITUTE...PIONEERS IN THE FIELD OF DATA PROCESSING EDUCATION...

E.C.P.I. is a publicly owned corporation that has been training computer programmers since 1956. We were the first school to develop a curriculum designed to train personnel to qualify for positions as computer programmers in business, industry and government. Today, we are the largest organization of its kind in the country, with over 65 schools coast-to-coast. Thousands of our graduates now fill essential, well paying jobs in some of the nation's most important firms.
